

Structural Adaptations Assignment

With a partner choose an organism you are interested in and research the following information:

- Environment/Habitat of the organism
- Energy sources of the organism
- At least 3 different structures with functions
- Adaptations that allow your organism to survive (behavioural or structural)
- One “fun fact” about your organism
- At least one picture of your organism with each structure labelled

Presentation:

You can present the following information in any format that you would like, as long as you include all of the above information. However, on the day of presentation you will be required to present your information in a ‘science fair-style’ format. This could be a poster, tri-fold chart or power point. Remember, other students will be walking around to view your presentation and compare adaptations with the organism they have chosen.

Marking:

Environment	/1
Energy sources	/2
3 different structures with functions	/3
Adaptations	/1
One Fun Fact	/1
One labelled picture	/1
